EH\forms\6201-12.doc (rev. 11/11)	Receipt #	Record ID
	Well Permit #	Septic Permit #

ATTENTION: Contractors/Builders/Permit Holder

Sewage System Elevation Requirements

The Sewage Disposal Permit contains crucial elevation data. This data indicates the required elevations to the bottom of the drainage portion of the septic system. It is imperative you share this information with your plumbing and septic system contractors prior to construction. The minimum elevation to the bottom of the drainage system, the soil boring and grade elevation location information can be found on the septic permit and corresponding documents.

If you have any questions regarding the grade elevation, the location of the elevation bench mark or you require verification or relocation of the grade elevation, contact this office and speak with the area sanitarian. We are available to meet at the site to re-evaluate and clarify the grade elevation prior to installation of the sewage disposal system.

After construction it may not be possible to obtain the required drainage system elevation without the installation of a sewage lift pump and pump chamber. Failure to install the system according to the permit conditions will void the permit.

If you have questions regarding this document, or wish to speak with the area sanitarian, please call (231) 724-6208.

_____ Applicant's Initials indicating they have read and understand the elevation requirements.
